

Trends in Clinical Informatics: A Nursing Perspective

Transforming Nursing Practice through Informatics and Technology

Joyce Sensmeier MS, RN-BC,
CPHIMS, FHIMSS, FAAN

Friday, April 29, 2011

Objectives

- Describe current informatics issues and the impact on clinical leaders
- Explore practical strategies for successful EHR adoption and optimization
- Envision the future of nursing and technology

American Recovery and Reinvestment Act of 2009

- HR 1 -- 111th Congress
- \$787 Billion
- Highly partisan vote
- Tax benefits total \$288 Billion
- Healthcare gets \$147.7 Billion
 - \$87B for Medicaid
 - \$25B for support for extending COBRA
 - **\$19B directly for HIT**
 - \$10B for NIH
- Infrastructure allocated \$81B

Transforming Health through Meaningful Use of Health Data

“Phased-in series of improved clinical data capture supporting more rigorous and robust quality measurement and improvement”

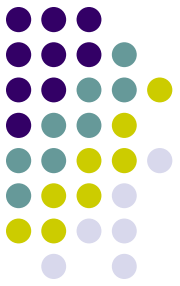

**Data
capture and
sharing**

**Advanced
clinical
processes**

**Improved
outcomes**

*“These goals can be achieved only through **the effective use of information** to support **better decision-making** and **more effective care processes** that improve health outcomes and reduce cost growth”*

5 Steps for Turning Meaningful Use into an Opportunity for Nursing

- ➔ Start managing the change now
- ➔ Standardize in advance of system implementation
- ➔ Rationalize the documentation workload
- ➔ Act as stewards of data
- ➔ Seize the opportunity

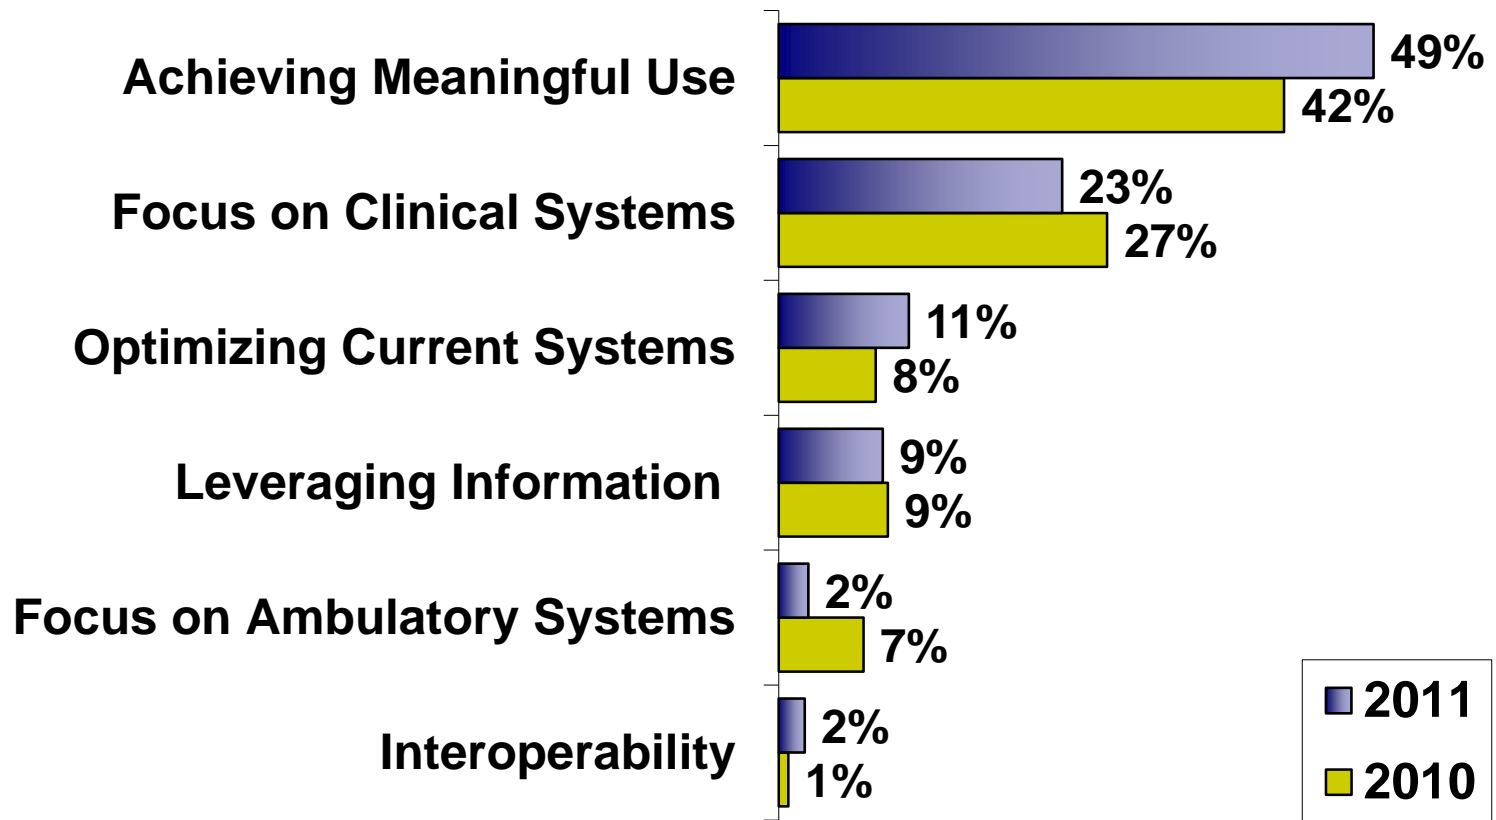

Implications for the HIT Workforce

- Technology is the greatest tool available to transform and innovate the delivery of nursing care
- Technology solutions exist today that can:
 - Eliminate repetitive and mundane tasks and improve the care environment
 - Improve safety and efficiency
- Greater input in development and testing of technology by nurses will speed adoption and reduce learning curve

2011 NI Workforce Survey

Largest Barrier to Success

Data from the 2011 HIMSS Nursing Informatics Workforce Survey
© HIMSS

Patient Protection and Affordable Care Act (ACA)

- Builds on changes in the ARRA
- Establishes a Patient Bill of Rights
- Provides one-stop-shopping for healthcare insurance needs at a federal government website

HealthCare.gov

- Begins work with the States on state-based insurance plans
- HHS to develop tools and leverage technologies to empower consumers and clinicians to take more control of consumer's healthcare needs

Nursing and the Empowered Consumer

The Internet-empowered “Informed patient” will level the relationship between patient and clinician to one of equal partners in decision-making and care management

Expert clinical knowledge is no longer the sole domain of the health professional

Transition from patient orientation to a consumer orientation changes what people want from their providers, healthcare organizations and systems

Empowered Consumer??

- 86 % of consumers don't access their medical records electronically
- Only 14% said they currently access their medical records electronically
- Nearly half (49%) call the doctor's office to request paper medical records
- Is this due to providers' inability to provide the records electronically or consumers' lack of awareness of available tools?

Where are Consumers Getting Health Information?

- **12%** Consumer-driven organizations (e.g., Patients Like Me, Daily Strength, Angie's List)
- **16%** Health service and manufacturing companies (e.g., Johnson & Johnson, Mayo Clinic)
- **16%** Government organizations (e.g., Centers for Disease Control and Prevention, Food and Drug Administration)
- **56%** ***Media/information service companies (e.g., Dr. Oz, The Doctors, iVillage, WebMD)***

eHealth Initiative's Top Trends for 2011

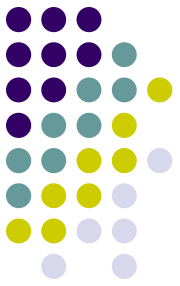

- The combination of:
 - National dialogue on healthcare
 - Meaningful Use criteria
 - Incentives toward patient engagement
 - Variety and maturation of digital patient engagement tools
 - Smart devices, patient portals

2011 is the tipping point for patient engagement!

The Evolution to Patient-Centered Care

Potential Consumer Roles:

Acting as Agents of Change

Participating in Shared Decision-Making

Verifying Facts and Providing Context

Integrating Better Health into the Full Context of Their Lives

The Medical Home

“A patient-centered, comprehensive approach to care that coordinates all facets of a patient’s care and medical history”

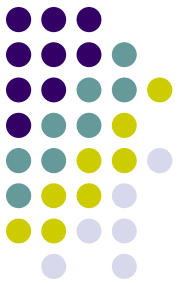

Makes patients active participants in treatment decisions and improves communication between a patient’s health care providers

PHRs Making Slow Progress

- Four in five U.S. adults believe that online Personal Health Records (PHRs) would be beneficial in managing their health and healthcare
- 10 percent of the public has a form of electronic PHR
- PHR Types:
 - Stand-alone
 - Health data populated by the consumer
 - Tethered to an EMR system
 - Controlled by physicians
 - Non-tethered
 - Internet-based PHRs largely controlled by consumers
- 20 Internet-based PHRs on the market as of Feb. 2010

The Value of Patient Portals

Providers report saving:

- 63 cents every time they don't have to mail a lab result (HealthPartners)
- \$17 every time they can handle a billing query online rather than by phone, and \$7 for every appointment scheduled online (NorthShore University Health System)
- 25% reduction in # of patients who have to come into the office for a surgical follow-up visit (Geisinger Health System)

Objectives

- Describe current informatics issues and the impact on clinical leaders
- **Explore practical strategies for successful EHR adoption and optimization**
- Envision the future of nursing and technology

Awarding IT: Improving Healthcare

Named in honor of **Dr. Nicholas E. Davies** - an Atlanta-based practice physician committed to the ideal of improving patient care through better health information management

Encourages and recognizes excellence implementation of EHR systems

- Implementation
- Strategy
- Planning
- Project Management
- Governance
- Value and ROI

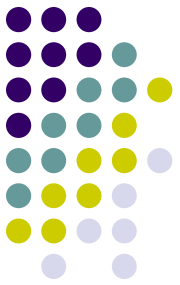

Program Objectives

- Promote the vision of EHR systems through concrete examples
- Understand and share documented value of EHR systems
- Provide visibility and recognition for high-impact EHR system
- Share successful EHR implementation strategies

Awards given – as of 2010

1995 – Organizational Awards (29 recognized)
2003 – Ambulatory Awards (21 recognized)
2004 – Public Health Awards (14 recognized)
2008 – Community Health Organization Awards (7 recognized)

Return on Investment Examples

- **Hard ROI**

- NorthShore Healthcare saw a \$2.5 million increase in revenue after solidly linking charge capture directly with orders
- Wayne Obstetrics reported that time devoted to document patient encounters decreased by four hours a week while its patient volume increased 225 percent
- NorthShore Healthcare reduced reliance on paper forms saving \$1.94 million a year in printing and procurement costs

Return on Investment Examples

- Soft ROI

- Queens Health Network experienced 50% fewer pharmacists interventions in medication orders in ambulatory care because of improved legibility, systems alerts and more complete prescriptions
- Citizen's Memorial physicians could send a "Message to Nursing" with specific instructions or information on a patient
- Ohio State University Health System found after its implementation that it could better comply with institutional policies regarding do-not-resuscitate orders, restraint orders and advance directives

Getting ROI out of Clinical Systems

- **NorthShore Healthcare** implemented an EMR with CPOE capability at three hospitals and 50 outpatient clinics/offices
- - 2004 Davies Award Winner

System users = 6,200

- Number of delays in administering medication has fallen by 70%
- Omitted administration of drugs has dropped 20%
- Test results for mammograms now take one day, down from as long as three weeks
- Cardiographics reports also take one day, down from as long as 10 days
- Spent \$7.5 million on training and \$35 million capital on hardware, software, and implementation

EMR Adoption ModelSM

2009 – 2010

2009 Final	2010 Final
---------------	---------------

Stage 7	Complete EMR; CCD transactions to share data; Data warehousing; Data continuity with ED, ambulatory, OP	0.7%	1.0%
Stage 6	Physician documentation (structured templates), full CDSS (variance & compliance), full R-PACS	1.6%	3.2%
Stage 5	Closed loop medication administration	3.8%	4.5%
Stage 4	CPOE, Clinical Decision Support (clinical protocols)	7.4%	10.5%
Stage 3	Nursing/clinical documentation (flow sheets), CDSS (error checking), PACS available outside Radiology	50.9%	49.0%
Stage 2	CDR, Controlled Medical Vocabulary, CDS, may have Document Imaging; HIE capable	16.9%	14.6%
Stage 1	Ancillaries – Lab, Rad, Pharmacy – All Installed	7.2%	7.1%
Stage 0	All Three Ancillaries Not Installed	11.5%	10.1%

Change Management Strategies for an Effective EMR Implementation

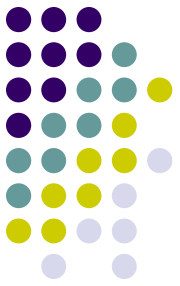

- Leadership
 - Establishing a Foundation for Change
- Willingness
 - Building commitment
- Ability
 - Developing Requisite Skill

Source: McCarthy, C. & Eastman, D., Change Management Strategies for an Effective EMR Implementation, 2010

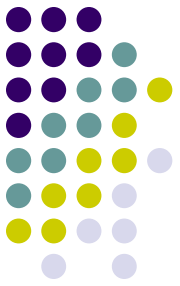

The Business Case for Change Management

“EMR technology disrupts the status quo, and along with the many opportunities it promises, it also brings a whirlwind of seemingly never-ending changes, which can have an entirely different effect on different people”

Change Management Defined

The human-focused work of engaging and preparing people to succeed in the new world of EMRs

“A process designed to deal directly and intentionally with the human factors involved in not just planning and implementing an EMR, but guiding the behavioral change to achieve the anticipated benefits”

A hand holding a red vertical line next to a list of business terms. The terms are: ANALYSIS, SOLUTION, PROCESS, OBJECTIVES, TEAMWORK, VISION, and SALES.

ANALYSIS
SOLUTION
PROCESS
OBJECTIVES
TEAMWORK
VISION
SALES

A Word about Resistance..

- Don't focus too much energy on the resisters
- Some of them may need to go away
- Treat resisters with respect, listen to them and get them involved
- Focus the majority of your efforts on the people who want to succeed

Training Strategies

- An effective user training program is user-centric, meaning it is role and workflow based, not system based
- Demonstrate relevant workflows in the new EMR system
- Highlight critical system skills
- Put energy into ensuring users are comfortable in their roles and able to use the system efficiently

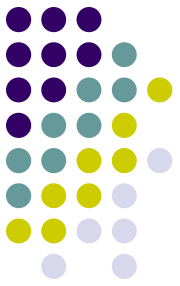

Objectives

- Describe current informatics issues and the impact on clinical leaders
- Explore informatics strategies to achieve patient centered care
- **Envision the future of nursing and technology**

The TIGER Initiative Foundation

- **NEW TIGER Website** @ www.thetigerinitiative.org
- Forming a 501c3 independent entity with initial support from HIMSS
- Partnerships and Collaborations growing in Nursing, Interdisciplinary and Allied Health to over 100 groups interested
- *Nursing Informatics: Where Technology and Caring Meet* Book Published (Thanks to Marion Ball and TIGER Editors)

Envision the Future of Nursing & Technology

The Alliance for Nursing Informatics (ANI) is a collaboration of organizations that represents a unified voice for Nursing Informatics, sponsored by AMIA and HIMSS

ANI represents more than 5,000 nurses, bringing together 28 separate nursing informatics groups that function separately at local, regional, national and international levels

Each of these organizations has its own established programs, publications and organizational structures for its members

Source: ANI Testimony to the October 2009 Forum on the Future of Nursing

The Future of Nursing: Leading Change, Advancing Health

Nurses constitute the largest segment of the nation's health care workforce at 3.1 million

In their front-line roles, nurses can play a vital role in helping realize the objectives set forth in the 2010 Affordable Care Act

A number of barriers prevent nurses from being able to respond effectively to rapidly changing health care settings and an evolving health care system

These barriers must be overcome to ensure that nurses are well-positioned to lead change and advance health

- 1) Nurses should practice to the full extent of their education and training
- 2) Nurses should achieve higher levels of education and training through an improved education system that promotes seamless academic progression
- 3) Nurses should be full partners, with physicians and other healthcare professionals in the redesigning of health care in the United States
- 4) Effective workforce planning and policy making require better data collection and an improved information infrastructure

Implications for Informatics

Nurses must be supported by a healthcare environment that adequately enables their knowledge-based work as:

- Leaders in the Effective Design and Use of EHR Systems
- Integrators of Patient Information
- Full Partners in Decision Making
- Care Coordinators Across Disciplines
- Advocates for Engaging Patients and Families
- Contributors to Standardize EHR Infrastructure

Improving Nursing Care Through Technology

- Technologies can create better work environment for inpatient nurses:
 - Improve efficiency, safety and quality
 - Add value to the way nurses coordinate and provide care
 - Alarm/event messaging
 - Biomedical device integration
 - Medication administration

Improving Nursing Care Through Technology

- Nurses do not want to be passive consumers of technology
- Nurses want devices that are integrated, voice activated, handheld, use biometrics, provide translation, are portable, are wireless, auto populate, and are “smart”
- Greater nurse satisfaction leads to greater patient satisfaction

Source; Cipriano, P. , Nurse Scholar in Residence, IOM 2011

Time and Motion Study

How Nurses Spend Their Time

7.2% of nursing practice time is spent on **patient assessment**

17.2% of nursing practice time is spent on **medication administration**

27.5% of *all* reported nurse time is spent on **documentation**

Nurses spend **30.8%** of their time **in the patient rooms** and **38.6%** of their time at the **nurse station**

During a typical **10-hour day**, a nurse travels **1-5 miles**

Closed Loop Medication Delivery System Workflow

Documentation
sent to eMAR/EHR

AHRQ Study on Bar-Code Technology with eMAR

Reduces Medication
Administration Errors
(such as wrong dose)

41 percent reduction

Reduces Timing
Errors (an hour or
more off schedule)

27 percent reduction

Bedside Monitoring Device Integration (BMDI)

- Ascension Health and Kaiser Permanente created inter-disciplinary teams, removing internal silos and engaging the C-suite to get more time back to nurses
- Example: Bedside Monitoring Device Integration at Ascension Health

**PAN-ZigBee Network Device Proximity
Measured to 3 Centimeters of Bed**

For Beds:
Pt Weight
HOB
Turn Assist
Alarms/Alerts
Response Times

Basic Bed Data

**Hill-Rom
Connectivity
Hub Mounted
& Powered
on Bed**

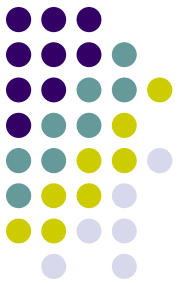

**Patient
Monitors
IV Pumps
Ventilators**

**Cerner CareAware
(NaviCare Pt Safety
Integrated)**

Growth in the Nursing Market

Nursing Applications with Highest Expected Purchase Rates for Hospitals over the Next 24 Months

- Nursing Documentation
 - Supports quality outcomes reporting
 - Makes CPOE more effective
 - Vital signs
 - Flow sheet data
- eMAR
 - Closed Loop Medication Administration
 - Impact on patient safety

Transforming Practice through Technology & Informatics will:

- Improve safety and efficiency
- Free clinicians from tasks
- Bring evidence for decisions to point of care
- Empower patients to be involved in care
- Enable nurses to:
 - Integrate data into health information
 - Consult in the home, LTC, Assisted living
 - Coordinate care across settings

Leading Change, Advancing Health

- Knowledge Management
 - Who, what, when, where, how
- Process Management
 - Scheduling and management of routine tasks
 - Process optimization
- Clinical and Business Intelligence
 - Forecasting trends and future needs
 - Suggesting process solutions
 - Clinical decision support
